Improving platform stability and performance

- Envirosuite is mid-way through migration away from our Australian and US-based data centres to Amazon Web Services
- AWS is the market leading cloud provider and offers a platform to Envirosuite that enables us to focus less on infrastructure and more on solving your problems.
- AWS services will enable Envirosuite to offer:
 - Increased redundancy
 - Higher availability
 - Improved scalability
 - Deployed in local geographies
- Ultimately this means a faster, more secure and more reliable experience for you.

Cybercrime to cost world \$10.5 trillion USD by 2025

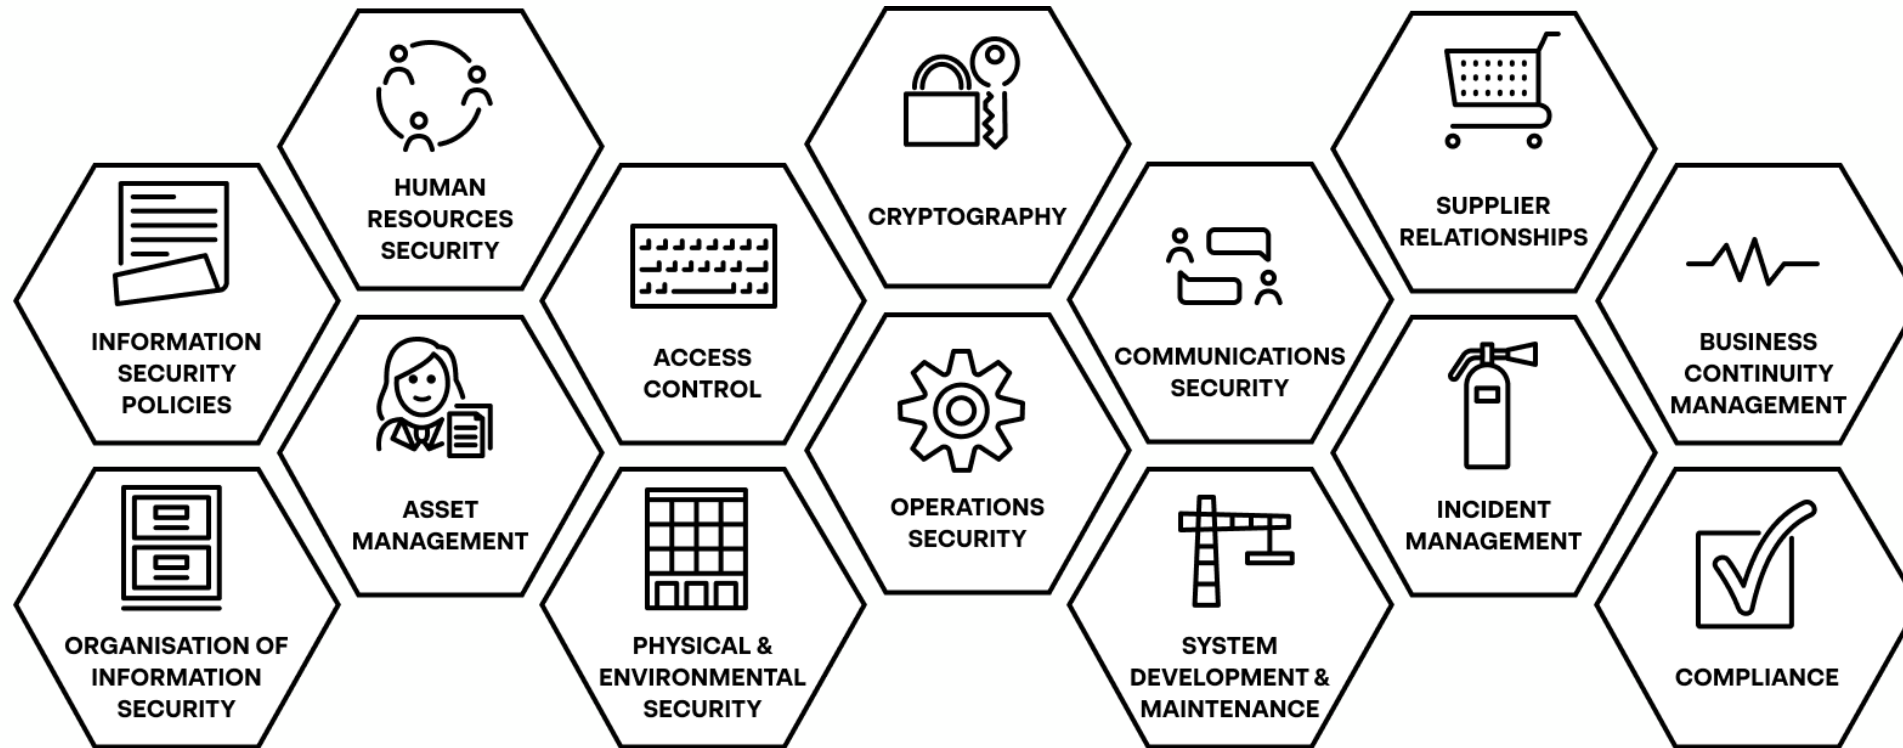

Forbes Technology Council, Feb 2023

Securing your data to give you peace of mind

- IEC / ISO 27001/2 is an internationally recognized standard for information security management
- Envirosuite has put in place over 114 different information security controls to achieve this significant level of compliance
- Some examples of major investment into controls include:
 - Automatic vulnerability scanning and remediation
 - Security reviews of solution architectures
 - Higher levels of encryption for your data

A holistic approach to cyber security management

Conformity with ISO/IEC 27001 means that an organization has put in place a system to manage risks related to the **security of data owned or handled by the company**, and that this system respects all the best practices and principles enshrined in this International Standard.
